MapServer "extent" ━━━━━━━

OWS "extent" ━━━━━━━

5x5 pixel grid for illustrative purposes

4.10 - MapServer computes cellsize as 100/5 = 20, but it should
be 100/4 = 25. OWS cellsize would be 125/5 = 25. Even though we
interpret the extents differently the cellsize should be identical.

This is one problem that needs fixing in 4.10.

The other is that all OWS service code needs to recognize the
differences in the interpretation of the extents.
